ENGLISH SAMPLE BRIEF · V0.4 · 3 NOVEMBER 2026

Drug Recovery Watch

How do recovery expectations differ from delivery dates, supply notes and observed outcomes?

Track a fixed set of FDA-source product presentations across saved observations, preserving identity holds, date precision and conflicting supply statements.

Public preview scope

Five selected interpretation cases, including one held identity. The underlying observations were captured on 2 and 3 November 2026; API source versions were 30 October and 2 November.

This brief presents two selected cases. The downloadable public sample contains 5 cases.

Underlying research edition

107 accepted product-presentation observations · 3 identity candidates held · 2 real source observations · 0 substantive revisions in the observed pair

Interpretation limits

- The 107 accepted records form a frozen cohort; they do not represent all US shortages or individual medicines.
- Across this one observation pair, 94 raw records were identical and 13 differed only in annotation-array order; no substantive forecast or supply-field changes were found.
- Three identity conflicts remain outside the accepted cohort; one accepted record retains a supply conflict that blocks recovery-outcome interpretation.
- No real-world inventory validation, recovery rate, forecast accuracy or final recovery outcome is reported. Current API links may differ from saved historical evidence.

PENICILLIN G BENZATHINE INJECTION · INTERPRETATION CASE

Delivery and recovery have different dates

2–3 November 2026 observations

The source reports a next delivery in November 2026 and estimated recovery in September 2027. One shipment does not establish normal supply.

Product
Penicillin G benzathine injection

Package NDC
60793-702-10

Manufacturer
Pfizer Inc.

Source availability
Limited Availability

Recovery precision

Next delivery estimate
November 2026

Recovery estimate
September 2027

This case comes from the 2 November baseline. Relevant source fields were unchanged in the 3 November follow-up. It is a purposefully selected interpretation example, not a random sample, recovery outcome or prediction-accuracy result. The linked API query returns current records, not the historical saved response.

Selected source references

1. FDA openFDA current package lookup
   $.results[909]; API skip=0 in the 2 November 2026 saved response; the live query may now differ.

RIFAMPIN INJECTION · INTERPRETATION CASE

A quarter is an uncertainty window

2–3 November 2026 observations

The source states Q4 2026. October 1 to December 31 encodes that quarter; it is not evidence of a promised December 31 recovery day.

Product
Rifampin injection

Package NDC
67457-445-60

Manufacturer
Mylan Institutional, a Viatris Company
