ENGLISH SAMPLE BRIEF · V0.3 · 3 NOVEMBER 2026

Economic Data Watch

Is this a new release, a revised value, or a change in what the data measure?

Follow selected official release plans and source versions, while separating reference periods, publication dates and observed availability.

Public preview scope

Seven historical cases across five countries, plus one verified Vietnam release observed on 3 November 2026. Historical examples are distinct from the four-country current panel.

This brief presents two selected cases. The downloadable public sample contains 8 cases.

Underlying research edition

4 countries in the current monitoring panel · 10 precisely defined monitored series · 18 official monitoring entry points · 1 verified new-release event in the follow-up

Interpretation limits

- The current panel is selected coverage, not exhaustive global monitoring.
- The follow-up establishes one new release and no verified same-period numeric revisions; this is not a lifetime count.
- Capture time establishes observation, not first public availability; date-only release plans do not establish intraday delays.
- Historical examples preserve limits such as archived homepage text, inaccessible full releases and unresolved first-access times.

BRAZIL · PUBLICATION PLAN CHANGE

Brazil: a census postponement is a plan change

2020-03

An archived IBGE English homepage records an announcement dated 17 March 2020 that moves the planned 2020 census to 2021. This case records that contemporary plan change, not the eventual completion year.

Announcement label
17 March 2020

Archived homepage
30 March 2020

Plan change
2020 → 2021

Evidence is extracted text of the archived official homepage, not the full announcement or original HTML bytes. The announcement page returned 403 during the underlying review. Reasons, budgets and eventual implementation are outside this claim.

JAPAN · METHODOLOGY AND COMPARABILITY

Japan: survey forms can affect year-on-year comparability

2018-03 / 2019-02

Japan's Statistics Bureau explains on 9 March 2018 that half the household sample began using new diary forms in January. It warns of possible discontinuity in year-on-year changes and contributions, supplies a propensity-score/inverse-probability adjustment, and records a retrospective recalculation on 8 February 2019.

Survey
Family Income and Expenditure Survey

New form use
Half the sample from January 2018

Recalculation notice
8 February 2019

The case confirms the official warning and adjustment arrangement. It does not audit every historical table or establish that every level series lacks back-calculation.
