ENGLISH SAMPLE BRIEF · V0.1 · 3 NOVEMBER 2026

Policy Target Watch

What did a government originally target, what changed, and which progress comparisons remain valid?

Link national Digital Decade targets to revised roadmaps and official progress measures, with deadlines and definitions visible.

Public preview scope

Six selected cases. The full edition contains 34 accepted and 5 held records: 2 numeric adjustments, 22 added targets and 10 unchanged targets among the accepted records.

This brief presents two selected cases. The downloadable public sample contains 6 cases.

Underlying research edition

3 countries: Austria, Estonia and Finland · 39 target records · 2 confirmed numeric target adjustments · 5 records held

Interpretation limits

- Selected national roadmaps and progress reports; no comprehensive EU-country ranking.
- National targets, EU collective targets, planned annual trajectories and observed results remain separate.
- Numeric comparison depends on aligned scope and definition. An added target is not a zero-to-target increase.
- All selected 2030 deadlines are still ahead. Current gaps do not establish final delivery, causes or political motives.

AUSTRIA · TARGET LOWERED

Austria lowers the national basic digital skills target

Original and revised roadmap versions; 2025 progress reported in 2026

Austria’s original roadmap uses a maximum-100% formulation and also contains a generic 80% heading. The Commission’s 2024 assessment identifies the national target as 100%. The revised roadmap sets 80% for 2030, supporting a 20-percentage-point reduction with the original qualifier retained.

Original national target
100% for 2030; original “max.” qualifier

Revised national target
80% for 2030

2025 observed progress
69.8%

Distance to revised target
10.2 percentage points

The 2024 Commission assessment resolves the national-versus-generic target ambiguity for this comparison. The measure covers people aged 16–74 with at least basic digital skills. The 2030 deadline is still ahead; no final delivery verdict or motive is inferred.

FINLAND · TARGET RAISED

Finland raises its SME digital intensity target

Original and revised roadmap versions; 2025 progress reported in 2026

Finland's revised roadmap explicitly raises the 2030 target for SMEs with at least basic digital intensity from 90% to 95%. The 2025 DIIv3 result is 94.0%, one percentage point below the revised target.

Original target
At least 90% by 2030

Revised target
95% by 2030

2025 DIIv3 observation
94.0%

Revision version and memo date
December 2024 version; 15 January 2025 memo

The surveyed SME group has 10–249 workers. Earlier DII baselines use a different version, so the 94.0% figure does not establish fulfillment of the original commitment. A pre-deadline distance is not a final 2030 verdict.
