MEASUREMENT INFRASTRUCTURE

We measure what standard data misses.

Dated, source-linked datasets from changing web pages, documents and official records.

6	public product previews	42	selected evidence cases	5	research domains

Xiaoran Liu, Founder | Singapore | hello@metracelabs.com

Product release: 3 November 2026. Public cases are samples, not customer or revenue metrics.

THE PROBLEM

Current values do not tell the whole story.

Analysts also need to know what was published, when it changed, and whether it remains comparable.

OVERWRITTEN HISTORY

A bank replaces its rate table. The old quote, effective date and customer conditions become harder to reconstruct.

DIFFERENT CLOCKS

A release date, reference month and archive observation date can point to different events.

CHANGING DEFINITIONS

A policy target or programme requirement may keep its label while its meaning or scope changes.

The job: reconstruct the record, then establish which comparisons the evidence supports.

Illustrated by current Metrace cases; selected coverage and uncertainty are stated for each product.

THE PRODUCT

Capture → structure → check → deliver

A repeatable research workflow, with definitions and evidence kept alongside each observation.

01

CAPTURE

Archived and current official pages, rate tables, releases and documents.

02

STRUCTURE

Entities, measures, source versions and the dates needed to interpret them.

03

CHECK

Comparability checks, source review, conflicts and explicit held cases.

04

DELIVER

Research workbenches, source-linked cases and downloadable tables.

AI supports extraction and review. It does not replace source evidence or establish independent human certification.

LIVE PUBLIC DEMONSTRATION

Six previews across five domains

A working catalogue and case explorer, with English PDFs, CSV and Excel samples.

ECONOMY

Economic Data Watch

8 cases

ECONOMY

India Deposit Rate Monitor

3 cases

EDUCATION

Curriculum Observatory

13 cases

TECHNOLOGY

Drug Recovery Watch

CULTURE · EXPLORATORY

Synopsis Notes

7 cases

Explore the actual cases: metracelabs.com/explore.html. Underlying edition coverage is separate from public sample size.

INITIAL COMMERCIAL FOCUS

Economic research for funds and banks

Two current research editions illustrate the workflow we want to test with institutional buyers.

ECONOMIC DATA WATCH

4 countries · 10 series

18 official monitoring entry points

Separate new releases from revisions.
Preserve reference periods and observation times.
8 public cases, including historical examples.

INDIA DEPOSIT RATE MONITOR

6 banks · 188 observations

66 candidate observations held

Retain tenor, amount and customer conditions.
Distinguish effective and archive dates.
3 public cases; 44 descriptive comparisons.

Accepted rate observations include repeat captures. Current editions differ from the earlier 30-country / 22-bank collections.

EXAMPLE: A COMPARABLE DEPOSIT QUOTE

A 25-basis-point change, with the conditions intact.

SBI · General-public domestic INR deposit · Below INR 3 crore · One year to less than two years

6.50%

TABLE COLUMN APPLICABILITY DATE

16 May 2025

ARCHIVE OBSERVATION DATE

31 May 2025

→

6.25%

TABLE COLUMN APPLICABILITY DATE

15 June 2025

ARCHIVE OBSERVATION DATE

8 July 2025

These observations support a matched quote comparison; they do not identify the first actual adjustment or causal pass-through.

Case IDR-C01 · Archived official SBI rate tables and exact table locators are linked in the public case.

REUSABLE MEASUREMENT CAPABILITY

Other domains test the same evidence discipline.

Each expansion has a specific measurement question and a bounded research edition.

Education	6 universities studied in detail	What changed in a degree’s rules?
Technology	107 accepted product presentations	Recovery estimate or delivery date?
Special topics	39 targets across 3 countries	Target change or definition change?
Culture · exploratory	29 complete English/French pairs	What does each introduction state?

Catalogue text does not prove teaching outcomes; FDA notices do not validate inventory; culture remains an exploratory comparison.

COMMERCIAL MODEL TO VALIDATE

Start with a focused data licence. Earn the renewal.

The original market entry is funds, bank research teams and data platforms.

BUYER WORKFLOW

Find a repeated research task where source history or comparability still requires manual work.

PAID TRIAL

Agree scope, evidence format, delivery cadence and acceptance criteria with a buyer.

RECURRING LICENCE

Convert demonstrated repeat value into an annual dataset licence; build catalogue/API access over time.

Validation priorities: buyer adoption, delivery cost, paid conversion and renewal.

Proposed business model and go-to-market plan. No contract values or customer traction are implied.

FOUNDER AND STAGE

An economist building measurements and the tools behind them.

Xiaoran Liu

Economics PhD candidate, NTU

B.A. Economics and Applied Mathematics, UC Berkeley

Research in cultural measurement and AI's effects on public knowledge.

Builds Metrace with AI coding and review tools.

EXPERIENCE & CURRENT PRODUCT

Top 100 of 1,000+ entries in Bridgewater's Forecasting the Future challenge.

First nationally in the Temasek and Financial Times Financial Challenge.

Six public product previews published on 3 November 2026.

Solo founder; unincorporated; no users, revenue or investment as of 3 November 2026. Full time from January 2027.

THE NEXT STAGE

Seeking US$500,000 in pre-seed support.

Turn source-backed research into reliable delivery for recurring institutional customers.

DATA ENGINEERING

Strengthen forward monitoring, version storage and repeatable quality checks.

CUSTOMER ACCESS

Meet funds, banks and data platforms; scope trials around real analyst work.

COMMERCIAL DELIVERY

Measure delivery cost, confirm willingness to pay and build the API when demand warrants it.
